

# Coal Mining & Processing's Annual Index for 1982 (Vol. 19)

## A

|                                                                            |    |
|----------------------------------------------------------------------------|----|
| AMC Coal Convention preview, April                                         | 46 |
| AMC International Mining Show preview, August                              | 53 |
| AMC preliminary program, April                                             | 50 |
| Acid rain and auto: Right recipe for the wrong compromise (Comment), April | 9  |
| Acid rain issue needs further study (NCA Hotwire), June                    | 32 |
| Adam, Bruce Ormby                                                          |    |
| —Coal industry shows best reclamation record, May                          | 48 |
| Railroad vs. slurrys: Facts or friction, January                           | 47 |
| Air supported belts offer conveying alternative, November                  | 54 |

## B

|                                                                        |    |
|------------------------------------------------------------------------|----|
| Baer, Richard E.                                                       |    |
| —How to design and improve stacking and reclaiming systems, November   | 48 |
| Belt filter presses squeeze into prep plants, January                  | 50 |
| Bergman, Perry D.                                                      |    |
| —Why coal slurries stir worldwide interest, October                    | 34 |
| Bright but uncertain future, A (NCA Hotwire), February                 | 43 |
| Britton, Scott G.                                                      |    |
| —Improving maintenance through organization and computer support, June | 38 |
| —Longwall economics: Looking at all the costs, December                | 38 |

## C

|                                                                        |    |
|------------------------------------------------------------------------|----|
| Cargo preference poses major threat (NCA Hotwire), May                 | 33 |
| Carra, Jerry                                                           |    |
| —Oil analysis: How to save \$60,000 a year in repair costs, June       | 48 |
| Carter, Russell A.                                                     |    |
| —Mobil enters the US coal market, November                             | 38 |
| Case for heat thawing, A, February                                     | 74 |
| Cash flow in the coal industry, February                               | 62 |
| Challenge facing coal exports, The (NCA Hotwire), March                | 35 |
| Choosing a cost-effective mine security system, September              | 86 |
| Clean Air Act at the crossroads, July                                  | 46 |
| Clean Air: Not a free lunch (Comment), August                          | 9  |
| Coal balancing by linear systems: Why, where, and how, March           | 70 |
| Coal industry shows best reclamation record, May                       | 48 |
| Concrete crib blocks bolster longwall roof support, October            | 58 |
| Controlling hydraulic system costs, June                               | 58 |
| Corey, Gordon R.                                                       |    |
| —Economic comparison of nuclear and coal-fired generation, An, January | 60 |

## D

|                                                     |    |
|-----------------------------------------------------|----|
| Deep cutting: Key to dust-free longwalling, August  | 40 |
| Denationalizing the west (Comment), March           | 9  |
| Diesel equipment aims at fuel efficiency, January   | 58 |
| Diesels underground: Overcoming a bad image, August | 45 |

## E

|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| Eastern Associated's longwall history: Expertise takes root in experience, December | 26  |
| Economic comparison of nuclear and coal-fired generation, A, January                | 60  |
| Ehret, Paul J.                                                                      |     |
| —Planning for subsidence, April                                                     | 130 |
| Electrical coagulation: A new process for prep plant water treatment, September     | 64  |
| Exhibition in print, April                                                          | 54  |
| Exhibition in print, August                                                         | 54  |
| Expanding the role of coal slurries, November                                       | 42  |
| Extending wire rope service life, June                                              | 57  |

## F

|                                                                                       |    |
|---------------------------------------------------------------------------------------|----|
| Face equipment lighting: Integrated vs. add-on, October                               | 50 |
| Falas, Eric                                                                           |    |
| —How Marietta boosted fines recovery by expanding plant flotation capacity, September | 46 |
| Farnell, Byron                                                                        |    |
| —How to build a good construction contract, September                                 | 82 |
| 50-50 chance of hyperinflation or depression, A, January                              | 78 |
| Fourth annual directory of new technology, March                                      | 52 |
| Freeze conditioning agents ease winter railcar unloading, February                    | 70 |

## G

|                                                                |     |
|----------------------------------------------------------------|-----|
| George, Thomas J.                                              |     |
| —Expanding the role of coal slurries, November                 | 42  |
| Guccione, Eugene                                               |     |
